MUHAMMAD AHSAN S/O NAWAB DIN

Web Developer

+92 3124690649 | ahsannawab6@gmail.com | muhammadahsandogar/ | iamahsandogar | Portfolio

SUMMARY:

Passionate MERN stack web developer with hands-on experience in building responsive, user-friendly, and fully functional web applications. Proficient in both front-end and back-end technologies, including React.js, Node.js, Express.js, and MongoDB. Adept at creating clean UI designs and efficient server-side logic. Committed to continuous learning and eager to contribute in a collaborative and fast-paced development environment.

TECHNICAL SKILLS:

Frontend: HTML5, CSS3, Tailwind CSS, Bootstrap5, Material UI, Ant Design, Shadcn, JavaScript, TypeScript, React.js, Redux Toolkit, Next.js

Backend: Node.js, Express.js, C#, Python, Django/DRF

Database: SQL, MongoDB

Tools & Platforms: Git, Github, VS Code, Figma, Netlify, Vercel, Trello, ClickUp, reCAPTCHA, AdSense

WORK EXPERIENCE:

Associate Fullstack

November 2025 - Currently working

Skylight Codeworks, Lahore

- Built scalable and modular frontend architecture using React (Vite), leveraging functional components, hooks (useState, useEffect, useMemo), and efficient bundling for improved performance.
- Implemented a component-driven UI system using Material UI (MUI), customizing themes, breakpoints, and reusable components to ensure responsive design and design consistency across the application.
- Optimized backend data rendering performance by implementing server-state management, memoization strategies, and component-level optimizations, reducing unnecessary re-renders and improving overall application responsiveness.

React Developer Intern

July 2024 - January 2025

SolitaryBiz, Lahore

- Utilized core React Hooks like useState, useEffect, useContext, along with advanced hooks such as useRef, useMemo, and useCallback to manage application behavior and optimize performance.
- Fetched and rendered real-time data using axios and APIs, ensuring state synchronization across components using Context API.
- Developed dynamic web interfaces using both class-based and modern functional components, leveraging props and state for reusable and interactive UI elements.
- Implemented efficient client-side routing with React Router, enabling seamless navigation, lazy loading of components, and improved user experience in single-page applications (SPAs).
- Handled errors and loading states with conditional rendering to ensure smooth user experience during API calls.

WordPress Developer Intern

August 2022 - October 2022

WasiSoft Technology, Lahore

- Gained hands-on experience designing and customizing WordPress pages using a variety of themes, plugins, and drag-and-drop page builders to meet specific design and functionality requirements.
- Integrated and configured navigation menus, contact forms, sliders, sidebars, and featured product sections to improve the usability and visual appeal of an e-commerce website.
- Enhanced user engagement by adding interactive WordPress widgets such as recent posts, featured products, and social media feeds, improving content visibility and site navigation.

EDUCATION:

Bachelor's in Computer Science (3.27/4.00)

October 2019 - October 2023

University of Management and Technology, Lahore

Intermediate (FSC) (A+ Grade)

August 2017 - August 2019

Punjab College of Science, Lahore

Matric (A+ Grade)

April 2015 - April 2017

Jinnah Public Secondary School, Lahore

PROJECTS:

SkySchool

Office Project

- Developed the frontend of a multi-tenant school management system using React, Redux Toolkit, and RTK Query, supporting Super Admin, Organization Admin, School Admin, Branch Admin, Admission Officer, and Account Officer roles.
- Implemented permission-driven dashboards, routes, navigation, and actions that dynamically adapted according to each user's assigned role and access level.
- Integrated REST APIs for managing organizations, schools, branches, users, teachers, students, admissions, and payments with efficient caching, loading states, and error handling.
- Built scalable and reusable frontend modules with centralized state management, protected routes, role-based UI rendering, and optimized API data synchronization.

SkyCRM

Office Project

- Developed the frontend of an office CRM using React, Vite, and Material-UI, featuring separate Admin and Employee panels.
- Implemented a dynamic dashboard displaying key metrics such as leads, project completion status, and employee performance by fetching and integrating backend APIs.
- Optimized frontend performance by controlling unnecessary component re-renders and implementing light/dark mode support.
- Ensured cross-device responsiveness and a seamless user experience across different screen sizes.

SkyLogs

Office Project

- Developed the SkyLogs employee attendance portal frontend using React and Redux Toolkit.
- Built responsive interfaces for daily check-in, check-out, attendance history, and employee time logs.
- Created user flows for leave applications, overtime requests, and approval status tracking.
- Integrated REST APIs and developed reusable, scalable frontend components with efficient state management.

VerStyle (Online Clothing Store)

Final Year Project

- Developed VerStyle, a full-featured responsive UI online clothing store as a Final Year Project using the **MERN stack** (MongoDB, Express.js, React.js, Node.js).
- Designed and implemented **user panel** and **admin dashboard**, enabling secure product browsing, order management, and admin-level product CRUD operations.
- Integrated shopping cart, wishlist, and filtering functionality to enhance user experience and streamline product discovery.

- Simulated a secure checkout process with a fake payment system using Visa and MasterCard options.
- Used MongoDB to structure and store user data, product details, and orders; implemented RESTful APIs with Node.js/Express for backend logic.

Portfolio Website

Internship Project

- Developed a responsive portfolio website using **ReactJS**, ensuring optimal viewing on all devices.
- Implemented smooth scrolling navigation purely with CSS scroll-behavior for enhanced user experience without JavaScript.
- Developed reusable, modular React components with scoped styling to ensure a clean, and maintainable UI.

Logo Authority

Freelancing Project

- Developed a mobile responsiveness voting platform using **ReactJS** and **Firebase**.
- Implemented a vote-limiting feature that triggers a CAPTCHA after every 5 votes.
- Integrated a **search functionality** on the results page to allow users to filter logos efficiently.
- **Deployed** the project to a live environment enabling real-time user interaction and feedback.

Diabetes Prediction

Course Project

- Developed a machine learning model using **Python** to predict the likelihood of **Type 2** Diabetes using the **Pima Indians Diabetes dataset**.
- Used **K-Nearest Neighbors KNN, Naive Bayes,** and **Decision Tree Classifier** to train and compare prediction models.
- Preprocessed the dataset by handling missing values, scaling features, and splitting data for training and testing.
